Tenerife, Canary Islands (Spain), October 6-9, 2013

Welcome to ITP2013

Continuing the well-established series of the ITP symposia, the Spanish National Research Council (CSIC) and the University La Laguna (ULL) are proud to be the organizers of the **20th International Symposium on Electro- and Liquid Phase-Separation Techniques (ITP2013)** to be held on October 6-9, 2013 in Puerto de la Cruz, Tenerife, Canary Islands, Spain.

The ITP2013 program will highlight new developments and applications of electro- and liquid phase-separation techniques, including HPLC, UHPLC, micro- and nano- LC, capillary and microchip electrophoresis (CEC, MEKC, cIEF, CGE...), two-dimensional electrophoresis and their multiple couplings (LCxLC, LC-MS, CE-MS...). The symposium will be structured in four days with an initial workshop, plenary lectures and contributed communications, from which a special session will be devoted to young scientists, as well as poster sessions, vendor seminars and exhibition.

Tenerife Island has an optimum climate all over the year, with unique and very beautiful landscapes that are worth seeing. It is well connected with most European countries by both of its airports. The accommodation capacity, as a very important touristic destination, is very high, with very affordable and new hotels to make pleasant the stay of all the attendants. The programme will include a visit to the volcano Mount Teide, declared World Heritage Site, as well as other social events to enjoy the Canarian traditions and gastronomy.

Besides, ITP2013 will be connected for the first time with the *XIII Meeting of the Spanish Society of Chromatography and Related Techniques (SECyTA2013)* that will be held at the same place on October 9-11, 2013, making possible to combine the assistance to both symposia in a very affordable way.

We are looking forward to meeting you in Tenerife!
